Multilingualism and Intercultural Communication-H. Ekkehard Wolff 2017-05-01 An in-depth look at the changing sociolinguistic dynamics that have influenced South African society. To date, there has been no published textbook which takes into account changing sociolinguistic dynamics that have influenced South African society. Multilingualism and Intercultural Communication breaks new ground in this arena. The scope of this book ranges from macro-sociolinguistic questions pertaining to language policies and their implementation (or non-implementation) to micro-sociolinguistic observations of actual language-use in verbal interaction, mainly in multilingual contexts of Higher Education (HE). There is a gradual move for the study of language and culture to be taught in the context of (professional) disciplines in which they would be used, for example, journalism and African languages, Education and African languages, etc. The book caters for this growing market. Because of its multilingual nature, it caters to English and Afrikaans language speakers, as well as the Sotho and Nguni language groups, the largest languages in South Africa [and also increasingly used in the context of South African Higher Education]. It brings together various inter-linked disciplines such as Sociolinguistics and Applied Language Studies, Media Studies and Journalism, History and Education, Social and Cultural Sciences, Law, Human Language Technology, Music, Intercultural Communication and Literary Studies. The unique cross-cutting disciplinary features of the book will make it a must-have for twenty-first century South African students and scholars and those interested in applied language issues.

Planning for a Career in Biomedical and Life Sciences-Avrum I. Gotlieb 2018-05-31 Planning for a Career in Biomedical and Life Sciences:Learn to Navigate a Tough Research Culture by Harnessing the Power of Career Building, Second Edition, presents useful information, insights and tips to those pursuing a career in the biomedical and life sciences. The book focuses on making educated choices during schooling, training, and the job search in both the academic and non-academic sectors. The book's premise lies in the notion that if users understand the full path of a career in either the biomedical or life science fields, they can proactively plan their career, recognize any opportunities that present themselves, and be well prepared to address important aspects of their own professional development. Topics include choosing a training path, selecting the best supervisor/mentor, and negotiating a job offer. Updates to this edition include an outline of core competencies to achieve success, how to build soft skills and tailor them to specific job opportunities, and how to increase collaborations across disciplines. Additionally, coverage on issues around diversity, health, wellness and work/life balance are expanded. This book is a valuable resource for undergraduate, graduate, medical and postdoctoral students in the biomedical and life sciences, as well as academic faculty and advisors. Revised and updated to address dealing with student failure and rejection and developing resilience Provides strategies on evaluating biomedical and life sciences education and professional development opportunities in a thorough and systematic fashion Discusses possible pitfalls and offers insights into how to navigate successfully at various points of a scientist's career Offers valuable advice on how to make the best choices for yourself at any stage in your career and how to choose supervisors and mentors who will support your career goals

Life Science Ethics-Gary L. Comstock 2010-08-24 Does nature have intrinsic value? Should we be doing more to save wilderness and ocean ecosystems? What are our duties to future generations of humans? Do animals have rights? This revised edition of "Life Science Ethics" introduces
these questions using narrative case studies on genetically modified foods, use of animals in research, nanotechnology, and global climate change, and then explores them in detail using essays written by nationally recognized experts in the ethics field. Part I introduces ethics, the relationship of religion to ethics, how we assess ethical arguments, and a method ethicists use to reason about ethical theories. Part II demonstrates the relevance of ethical reasoning to the environment, land, farms, food, biotechnology, genetically modified foods, animals in agriculture and research, climate change, and nanotechnology. Part III presents case studies for the topics found in Part II.

Study and Master Life Sciences Grade 11 CAPS Study Guide- Gonassagaren S. Pillay 2014-08-21

The Life Science - 1987

Mathematics for the Life Sciences - Erin N. Bodine 2014-08-17

The life sciences deal with a vast array of problems at different spatial, temporal, and organizational scales. The mathematics necessary to describe, model, and analyze these problems is similarly diverse, incorporating quantitative techniques that are rarely taught in standard undergraduate courses. This textbook provides an accessible introduction to these critical mathematical concepts, linking them to biological observation and theory while also presenting the computational tools needed to address problems not readily investigated using mathematics alone. Proven in the classroom and requiring only a background in high school math, Mathematics for the Life Sciences doesn't just focus on calculus as do most other textbooks on the subject. It covers deterministic methods and those that incorporate uncertainty, problems in discrete and continuous time, probability, graphing and data analysis, matrix modeling, difference equations, differential equations, and much more. The book uses MATLAB throughout, explaining how to use it, write code, and connect models to data in examples chosen from across the life sciences. Provides undergraduate life science students with a succinct overview of major mathematical concepts that are essential for modern biology Covers all the major quantitative concepts that national reports have identified as the ideal components of an entry-level course for life science students Provides good background for the MCAT, which now includes data-based and statistical reasoning Explicitly links data and math modeling Includes end-of-chapter homework problems, end-of-unit student projects, and select answers to homework problems Uses MATLAB throughout, and MATLAB m-files with an R supplement are available online Prepares students to read with comprehension the growing quantitative literature across the life sciences A solutions manual for professors and an illustration package is available
